To whom it may concern:

At Apogee Lighting, we are committed to sustainability in every aspect of our business. Our company-wide pledge is to prioritize environmental stewardship, ensuring that our practices and products reflect our dedication to a greener future.

- As part of our objective to incorporate 100% recycled metal in our manufacturing process, we use recycled aluminum and furthermore all our aluminum scrap is subsequently recycled.
- Our acoustic lighting panels and plastic lenses incorporate recycled materials, further reducing our environmental impact. We spend more money on components in order to select the lowest energy consumption LEDs, reducing our average watts per square foot by 100% since 2019.
- In 2022 we started offering fabric lenses in addition to PVC for our ceiling products.
- We have made a concerted effort to switch all battery chemistry to Lithium Iron phosphate, which is the most stable and long-lasting technology making our fixtures compatible with solar installations long before these initiatives are being deployed in the rail sector.
- All our power systems are designed to run at maximum efficiency to reduce driver losses and minimize creation of heat. Heat produced by lighting fixtures requires more HVAC usage and increases carbon footprint.
- We are actively working to reduce our energy consumption during the manufacturing process ensuring that they are as eco-friendly as possible. For example, Apogee has made a significant investment in switching our laser cutter to fiber instead of CO2, reducing energy consumption significantly while also mitigating waste.

These are just a few examples of the ongoing initiative, which is at the core of Apogee's business practices, driving us to constantly innovate and improve our sustainability efforts. At Apogee Lighting, sustainability isn't just a goal—it's a fundamental principle that guides everything we do.

Sincerely yours,
